

# Phillip Futures - First Broker in Asia to offer the StrategyBot Automated Trading Software

February 15, 2005 - **Phillip Futures** is the **first broker in Asia** to tie up with StrategyLand Research to offer investors a futuristic approach to futures trading with **StrategyBot** – a sophisticated software application that aids private traders, hedge fund managers and financial institutions in their on-line trading of futures and most of all, offers investors the option of automated futures trading.

A **StrategyBot** user is able to:

- Rent fully automated trading strategies of his/her choice available from **BotTrading™** \*
- Develop his/her own automated trading strategies
- Request StrategyLand to develop automated trading strategies on his/her own specifications
- Use multiple strategies on multiple markets, running during different worldwide time zones
- Buy or lease the software
- Get upgrades frequently without charge
- Trade futures contracts of American, European and Asian indices, currencies, metal, energy, agriculture, and more.

**Teyu Che Chern, Executive Director of Phillip Futures**, says, "Offering StrategyBot is part of our continued commitment to offer trading options to our trusted clients. We believe that our customers would appreciate the option of using StrategyBot and its ancillary features, such as automated trading, auto trailing stop, free charting with intraday and historical data, and its risk management function."

**Daniel Loski, Vice President of StrategyLand**, says "After experiencing a huge boom in sales in the USA and Middle East last year, now with Phillip Futures offering StrategyBot, our worldwide base of clients can for the first time trade Asian Futures Contracts. We are very excited and are committed to train users in joint efforts with Phillip Futures."

---

\* **BotTrading™** are computer servers loaded with strategies (designed by StrategyLand Research) that execute 'Buy' and 'Sell' trade operations automatically without the need for manual intervention by the user or the intermediate broker for each trade execution. The servers execute thousands of analysis per minute, 24 hours a day, 5 days a week on several different markets worldwide. Decisions to trade are based on pre-defined algorithms. No human being can manually perform such analytic decisions in the same period of time. Users have a wide choice of strategies to select from. Users of StrategyBot running StrategyLand strategies have their portfolio active even when they aren't watching. Users still have ultimate control of the strategies they choose with the capability to terminate, liquidate, change or substitute strategies at any time.
